Bulk Filling Capsules into Cases

Weigh Right offers our PMB-3601 pharmaceutical-grade bulk net weigh scale system. Shown below is the Weigh Right model PMB-3601 vibratory scale to accurately and quickly fill up to 40,000 capsules into cases. Optional features shown in this photo is the mounting of a flow-through metal detector (provided by others) and a low-level case conveyor angled to raise the filled case to a requested elevation height. If metal is detected, the system will STOP and require a reset. This project required round tube frame design and pneumatic control of the supply hopper flow gate and TILT option.
